

1 Homepage / landing

Conversion-focused entry point — gets a new visitor to a service fast. Three approaches.

1a Hero + direct CTA

Single bold headline and one CTA into the catalog; trust stat right under the fold.

1b Catalog-first

Skips the pitch — shows priced services immediately for a visitor who already knows what GrindingApp is.

1c Trust-first

Leads with proof (rating, orders, safety note) before the ask — for a visitor wary of the account-risk angle.

Try next: "put 1c's safety note into 1a's hero" · "add a how-it-works strip"

2 Service catalog & detail

GTA6 boosting catalog (Heist / Reputation / Economy) → service detail. Three structural approaches.

1a List → full-screen detail

Straightforward scannable list, tap a row to push into a dedicated detail screen.

1. Catalog → 2. Detail

1b Grid cards → bottom sheet

Visual 2-col grid; tapping a card raises a partial bottom sheet instead of leaving the catalog context.

1. Catalog grid → 2. Sheet detail

1c Category tabs → tabbed detail

Catalog grouped under Heist/Reputation/Economy tabs; detail screen itself has Description/FAQ tabs for depth.

1. Tabbed catalog → 2. Tabbed detail

Try next: "combine 1a's list with 1b's sheet detail" · "add a price filter to 1c"

2 Checkout & payment

Platform (PSS/Xbox/PC), preferred time, notes, payment. Three ways to structure the form.

2a Single scrolling form

Everything on one page, sticky pay button. Fastest for a returning buyer.

2b 3-step wizard

Platform → Schedule → Payment, one focused decision per screen with a stepper header.

2c Accordion summary-first

Sections collapsed by default so the total and disclaimer stay visible up top; expand what needs editing.

Try next: "use 2b's stepper but keep the disclaimer visible like 2c"

3 Delivery & review

Order finished → confirmation and rating. Three levels of detail.

3a Simple confirmation

Minimal: mark it delivered, ask for a star rating, done.

3b Confirmation + before/after recap

Shows the tangible result (stat delta) before asking for a review — reinforces value delivered.

3c Timeline recap

Vertical order timeline builds trust by showing every step that happened, then asks for a rating.

Try next: "make 3c the default and drop the stat recap" · "add a tip/gratuity step after 3a"
